PROFESSIONAL SUMMARY

Final-year B.Tech student in Artificial Intelligence & Machine Learning at VIT Bhopal University (CGPA: 9.04/10) building production systems end-to-end — GenAI applications (RAG, LLM agents), applied ML models, and full-stack products with real-time backends. Co-authored a research paper accepted for oral presentation at ICAAIC 2025. Seeking full-time and internship roles in GenAI/ML Engineering and Full-Stack Development.

EDUCATION

VIT Bhopal University — B.Tech, Artificial Intelligence & Machine Learning *Sep 2023 – May 2027 (Expected)*
CGPA: 9.04 / 10.0

St. Joseph's Convent, Jabalpur *2021 – 2023*

Senior Secondary (XII): 71.4% | Secondary (X): 95.2%

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL, TypeScript

GenAI & LLM: LangChain, Retrieval-Augmented Generation (RAG), Prompt Engineering, Groq LLaMA 3.3 70B API, Gemini API, Anthropic Claude API, Multi-Agent Systems

Machine Learning: Scikit-learn, LightGBM, Random Forest, Linear Regression, Feature Engineering, Model Evaluation (Precision, Recall, F1, ROC-AUC, R^2), Pandas, NumPy

Frontend: React, Next.js, Tailwind CSS, Vite, Three.js, GSAP, Framer Motion

Computer Vision: OpenCV, TensorFlow.js

Cloud & Tools: AWS (Foundational), Microsoft Azure (DP-900), Git/GitHub, Vercel, Railway

EXPERIENCE

AI with Python Intern — EDXcellence *Jan 2026 – Apr 2026*

- Engineered a diabetes classification pipeline using a Random Forest Classifier (100 estimators) on the Pima Indians Diabetes Dataset (768 records, 8 features), achieving 72.08% accuracy with 0.79 precision and 0.78 recall on the negative class; delivered full evaluation reports using Matplotlib and Seaborn.
- Built a Multiple Linear Regression model predicting student performance from study-habit features, achieving $R^2 = 0.92$ and identifying weekly study hours as the strongest predictor (+3.5 score points per hour).

PROJECTS

Launchpad — AI Career Preparation Platform *2026*

Next.js, FastAPI, Groq LLaMA 3.3 70B, LangChain | launchpad-smoky-ten.vercel.app

- Designed and shipped a full-stack GenAI platform with resume ATS scoring, an adaptive voice-enabled mock-interview engine, a RAG-based knowledge assistant, and a personalized learning-roadmap generator.
- Built a RAG pipeline for semantic search over uploaded documents and an ATS-scoring engine benchmarking resumes against job descriptions; deployed on Vercel/Railway, resolving LangChain breaking-API changes and CORS misconfiguration.

MafiaMind — Real-Time Multiplayer Social Deduction Game *2026*

React 19, TanStack Start, Supabase (Postgres, Realtime, Auth), Google Gemini 3 | mafia-mind.vercel.app

- Built a real-time multiplayer social-deduction game (8 players) where AI agents — driven by Gemini 3 across 10 personas — generate in-character chat and structured JSON suspicion scores (0–100, with reasoning) each round.
- Implemented Supabase Realtime for live state sync and Postgres Row-Level Security with database triggers so players only see their own role until game end; built a post-game Suspicion Heatmap visualizing every AI score and its reasoning. Resolved a production deployment bug and performed a full git-history rewrite to remove leaked credentials.

SafeWalk — AI-Powered Fall Detection App *2024*

TensorFlow.js, React, Next.js, TypeScript | 3rd Place, CodeVerse Hackathon (250+ teams)

- Built a real-time, privacy-first fall-detection app performing pose estimation entirely in-browser via TensorFlow.js, so no video data leaves the device.

Additional: Personal Portfolio — animated Three.js/GSAP site built with Vite 8 & React 19 (mansaa-portfolio.vercel.app) · LocalHub — maps-based business directory (Leaflet.js)

RESEARCH EXPERIENCE

Diabetes Onset Prediction — ICAAIC 2025 *2024 – 2025*

Accepted for Oral Presentation, 4th International Conference on Applied AI and Computing

- Co-authored a research paper benchmarking LightGBM against deep learning models for diabetes onset prediction, contributing to preprocessing, EDA, model training, and comparative evaluation across accuracy, precision, recall, F1, and AUC-ROC. One of a small number of third-year VIT Bhopal students selected to present at an international AI conference.

ACHIEVEMENTS

- Selected, Amazon ML School 2026 — Top 3,000 of 134,000+ applicants | 3rd Place — CodeVerse Hackathon (250+ teams)
- Cleared Round 1, awaiting Round 2 — Polaris Fellowship 2026 | Selected, Round 1 — First Fellowship
- 150+ problems solved on LeetCode; active LeetCode & Codeforces contest participant

CERTIFICATIONS

- IBM — Python for Data Science, AI and Development | IBM — Generative AI Using IBM Watsonx
- Microsoft — Azure Data Fundamentals (DP-900) | University of Michigan (Coursera) — Applied ML in Python
- NPTEL — IoT (92%, Top 2% Nationwide); Cloud Computing (85%, Top 5% Nationwide)
