EDUCATION

Vellore Institute of Technology

B.Tech in Artificial Intelligence and Machine Learning

Sep 2023 – May 2027

CGPA: 9.07 / 10.0

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript

Core CS: Data Structures and Algorithms, OOP, DBMS, OS; 250+ LeetCode problems, Codeforces contests

Backend and Databases: FastAPI, REST APIs, JWT Authentication, PostgreSQL, SQLAlchemy, Alembic, Supabase

Frontend: React, Next.js, HTML, CSS, Tailwind CSS

Machine Learning and GenAI: Machine Learning, Scikit-learn, LightGBM, LLMs (Groq, Gemini), LangChain, RAG, Vector Databases (ChromaDB), Embeddings, Prompt Engineering

Data Analysis: Pandas, NumPy, Matplotlib, Recharts, Data Visualization, Data Preprocessing, Model Evaluation

Cloud and Tools: AWS, Git, GitHub, Pytest, Vercel, Render, Railway

PROJECTS

RepoIQ – GitHub Repository Analysis Platform

FastAPI, React, TypeScript, PostgreSQL, Groq API (Llama 3.3 70B)

repoiq-insight.vercel.app

- Built a full-stack platform that imports any public GitHub repository and uses an LLM to generate architecture summaries, tech-stack breakdowns, README drafts and interview questions.
- Designed a rule-based health-scoring engine (0–100) over 10 weighted signals (tests, CI, commit recency, license, docs) and built a React/TypeScript analytics dashboard with Recharts.
- Architected a layered FastAPI REST backend (routers, services, repositories) with JWT/bcrypt authentication, SQLAlchemy 2.0, Alembic migrations and a Pytest suite; deployed on Vercel and Render.

Launchpad – AI Career Preparation Platform

Next.js, FastAPI, LangChain, ChromaDB, Groq API (Llama 3.3 70B)

launchpad-smoky-ten.vercel.app

- Built an ATS resume analyzer that scores resumes (0–100) against a job description, flags missing keywords and exports ATS-formatted PDFs.
- Implemented a RAG pipeline (LangChain chunking, MiniLM embeddings, ChromaDB vector search) for source-grounded answers from course PDFs.
- Developed a 5-round adaptive mock interview with per-answer scoring (0–10), feedback and voice input; deployed on Vercel and Railway.

MafiaMind – Real-Time Multiplayer Social Deduction Game

React 19, TanStack Start, TypeScript, Supabase, Google Gemini

mafia-mind.vercel.app

- Built a real-time game (up to 8 players) on Supabase Realtime where Gemini-powered AI players chat and vote.
- Engineered structured LLM outputs (0–100 suspicion scores with reasoning) that drive AI voting and a heatmap.
- Secured hidden roles with Postgres row-level security, server-authoritative logic and role-reveal DB triggers.

EXPERIENCE

EDXcellence

AI with Python Intern

Jan 2026 – Apr 2026

Remote

- Fixed a class-precision gap (0.61 vs 0.79) in a diabetes Random Forest model by handling zero-encoded missing values and class imbalance in a scikit-learn pipeline; recall rose 0.62 to 0.76, ROC-AUC 0.812 to 0.837.
- Benchmarked 9 regression models with 5-fold CV and GridSearchCV on 1,000 records; tuned Ridge reached R-squared 0.88 (RMSE 5.37); shipped a CLI for single and batch predictions.

ACHIEVEMENTS, PUBLICATION AND CERTIFICATIONS

- 3rd Place, CodeVerse Hackathon 2025** (200+ teams): built SafeWalk, an in-browser AI fall-detection app.
- Selected for Amazon ML School 2026** (top 3,000 of 134,000+ applicants).
- Co-author, ICAAI 2025:** LightGBM vs deep learning for diabetes onset prediction (96.8% accuracy).
- Certifications:** Azure Data Fundamentals (DP-900); IBM Generative AI (watsonx); UMich Applied ML in Python.
