PROFESSIONAL SUMMARY

Third-year B.Tech student in Artificial Intelligence & Machine Learning at VIT Bhopal University (CGPA: 9.04/10) with hands-on experience building machine learning models, computer vision systems, and full-stack AI applications using Python, Scikit-learn, and LLM frameworks including LangChain, RAG, and the Groq API. Co-authored a research paper accepted for oral presentation at an international AI conference (ICAAIC 2025) and won 3rd place at a 250+ team national hackathon. Actively strengthening DSA fundamentals (150+ LeetCode problems solved, regular contest participant) while pursuing internship and full-time roles in Machine Learning Engineering, Data Analysis, and Software Development.

EDUCATION

VIT Bhopal University — B.Tech, Artificial Intelligence & Machine Learning | CGPA: 9.04 / 10 Sep 2023 – May 2027
Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management, Cloud Computing, Computer Vision, Statistics
St. Joseph's Convent, Jabalpur | Senior Secondary (XII): 71.4% | Secondary (X): 95.2% 2021 – 2023

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, SQL

Machine Learning & AI: Scikit-learn, Pandas, NumPy, Random Forest, LightGBM, Linear Regression, Feature Engineering, Model Evaluation, LangChain, RAG (Retrieval-Augmented Generation), Prompt Engineering, Groq LLaMA API

Computer Vision & Web Development: OpenCV, TensorFlow.js (in-browser inference), React, Next.js, TypeScript, Tailwind CSS (working knowledge)

Cloud & Tools: AWS (Foundational), Microsoft Azure (DP-900 Certified), Git, GitHub, Streamlit, Vercel, Railway

DSA & Competitive Programming: 150+ problems solved on LeetCode; active LeetCode & Codeforces contest participant

EXPERIENCE

AI with Python Intern — EDXcellence Jan 2026 – Apr 2026

- Built a Diabetes Classification model using a Random Forest Classifier (100 estimators) on the Pima Indians dataset (768 records, 8 features), achieving 72.08% accuracy with 0.79 precision / 0.78 recall for the negative class.
- Developed a Student Performance Prediction model using Multiple Linear Regression on study habits data, achieving an R^2 score of 0.92 and identifying weekly study hours as the strongest predictor (+3.5 score points per hour).
- Produced complete evaluation reports including confusion matrices, classification reports, and feature-importance visualizations using Matplotlib and Seaborn.

PROJECTS

Launchpad — AI Career Preparation Platform | Next.js, FastAPI, Groq LLaMA 3.3 70B, LangChain 2026

- Built and deployed a full-stack AI platform offering resume ATS scoring & optimization, adaptive mock interviews with voice input, a RAG-based knowledge assistant, and personalized learning roadmaps.
- Implemented a RAG pipeline for semantic search over user-uploaded documents and an ATS scoring engine that benchmarks resumes against job descriptions to surface missing keywords and improvement suggestions.
- Deployed the frontend on Vercel and backend on Railway with environment-based configuration and secure API key management.

SafeWalk — AI-Powered Fall Detection App | TensorFlow.js, React, Next.js, TypeScript, Tailwind CSS 2024

- Built a real-time, privacy-first web app that detects falls in elderly users using live webcam input, with TensorFlow.js performing fully in-browser inference (no data leaves the device).
- Built a responsive, accessible frontend and collaborated in a team using GitHub feature branches, pull requests, and CI; won 3rd Place out of 250+ teams at the CodeVerse Hackathon.

Exam Proctoring System | Python, OpenCV, NumPy 2025

- Built a real-time AI proctoring tool that monitors students during online exams via webcam using a modular capture → detection → classification → alert pipeline; packaged as an installable Python project with documentation.

MafiaMind — Multi-Agent LLM Social Deduction Game | Java Spring Boot, WebSockets, FastAPI, LLM APIs 2026

- Designing a real-time multiplayer Mafia/Werewolf game where one player is a hidden LLM agent that reasons over chat history, forms suspicion scores, and adapts its behavior to blend in (Spring Boot + WebSocket backend, FastAPI AI service).

RESEARCH EXPERIENCE

Clinical Decision Support via Machine Learning: Diabetes Onset Prediction 2024 – 2025

4th International Conference on Applied Artificial Intelligence and Computing (ICAAIC 2025) — Accepted for Oral Presentation

- Co-authored a research paper benchmarking LightGBM against deep learning models for diabetes onset prediction, contributing to preprocessing, EDA, model training, and comparative evaluation (accuracy, precision, recall, F1, AUC-ROC).
- One of a small number of third-year students at VIT Bhopal to present research at an international AI conference.

ACHIEVEMENTS

- 3rd Place — CodeVerse Hackathon (250+ teams) for SafeWalk, an AI-powered fall detection app
- NPTL — Introduction to Internet of Things: 92% (Top 2% Nationwide); Cloud Computing: 85% (Top 5% Nationwide)
- Solved 150+ problems on LeetCode; active participant in LeetCode and Codeforces contests

CERTIFICATIONS

IBM — Python for Data Science, AI and Development | IBM — Generative AI Using IBM Watsonx | Microsoft — Certified Azure Data Fundamentals (DP-900) | Microsoft — Azure AI Odyssey | University of Michigan (Coursera) — Applied Machine Learning in Python | ServiceNow — Introduction to Agentic AI (SmartBridge Virtual Internship Program)

EXTRACURRICULAR & LEADERSHIP

- Core Member, AWS Club (Design Team), VIT Bhopal | Volunteer, TCS Recruitment Drive, VIT Bhopal
